1 Question No. 2.45

Can you construct a Rhombus ABCD with AC=6 and BD=7 ?

2 EXPLANATION

Let the vertices of the rhombus ABCD be $\mathbf{A}, \mathbf{B}, \mathbf{C}$ and \mathbf{D} .

Given AC and BD are the diagonals. AC = 6 and BD = 7

And O is the midpoint of rhombus.

$$OA = OC = \frac{1}{2} \times AC \tag{2.0.1}$$

$$OA = OC = \frac{1}{2} \times 6 = 3$$
 (2.0.2)

$$OD = OB = \frac{1}{2} \times BD \tag{2.0.3}$$

$$OD = OB = \frac{1}{2} \times 7 = 3.5$$
 (2.0.4)

We obtain the vertices of the rhombus as follows

$$\mathbf{A} = \begin{pmatrix} -3 \\ 0 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 0 \\ -3.5 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 3 \\ 0 \end{pmatrix}, \mathbf{D} = \begin{pmatrix} 0 \\ 3.5 \end{pmatrix} (2.0.5)$$

Plot the Rhombus ABCD is as follows:
